Which two values are compared by the binary comparison function in authentication that is based on Active Directory? (Choose Two)

- A . subject alternative name and the common name
- B . MS-CHAPV2 provided machine credentials and credentials stored in Active Directory
- C . user-presented password hash and a hash stored in Active Directory
- D . user-presented certificate and a certificate stored in Active Directory

**Answer:** AB

Explanation:

Basic certificate checking does not require an identity source. If you want binary comparison checking for the certificates, you must select an identity source. If you select Active Directory as an identity source, subject and common name and subject alternative name (all values) can be used to look up a user.
