Question: 45

The CDC recommends HIV screening for:

- A. All patients aged 13 to 64 in all health care settings
- B. All patients aged 13 to 64 who are at increased risk for HIV
- C. All patients aged 13 to 64 who are sexually active

Answer: A

The CDC recommends HIV screening for all patients aged 13 to 64 in all health care settings.

Question: 46

The leading cause of death in women age 65 and over is:

- A. Cancer
- B. Heart disease
- C. Pneumonia

Answer: B

Heart disease is the leading cause of death in women age 65 and over. Cancer is the second leading cause of death in women age 65 and over. Pneumonia is the seventh leading cause of death in women age 65 and over.

Question: 47

Which vaccine is safe for use in pregnancy?

- A. Live attenuated nasal flu vaccine
- B. Rubella
- C. Tdap

Answer: C

Tdap is safe for use in pregnancy. Tdap is recommended in the third trimester of pregnancy to confer passive immunity to the fetus. Rubella and live attenuated nasal flu vaccines are contraindicated in pregnancy.

Question: 48

Which is an effective treatment for primary dysmenorrhea?

- A. Aspirin
- B. Copper IUD
- C. NSAIDS (non-steroidal anti-inflammatory drugs)

Answer: C

NSAIDS are an effective treatment for primary dysmenorrhea. The Copper IUD is likely to increase the severity of primary dysmenorrhea. Aspirin is not indicated for the treatment of primary dysmenorrhea.

Question: 49

Which set of lab results would indicate hypothyroidism?

- A. Decreased TSH, increased FT4
- B. Increased TSH, decreased FT4
- C. Increased TSH, increased FT4

Answer: B

Increased TSH and decreased FT4 would indicate hypothyroidism.
